Earthquakes

California is earthquake country!

Thousands of earthquakes occur in California each year, but most are too small to be felt. Some cause moderate damage and injuries in a small area. Others can cause regional destruction.

Because the San Andreas fault is the longest fault in the region, it produces the largest earthquakes. Scientists estimate that large earthquakes on the San Andreas occur about every 150 years. The largest earthquake on the southern portion of the San Andreas in recorded history occurred in 1857. The fault ruptured all the way

from Parkfield in southern Monterey County to Cajon Pass in San Bernardino County. Scientists estimate its magnitude at 7.9. A repeat of this earthquake today would cause extensive damage, deaths, and injuries throughout Southern California. Many scientists are even more concerned about the potential for a large earthquake on the southernmost section of the San Andreas, from the Salton Sea through the Coachella Valley to the Cajon Pass, where an earthquake has not occurred since around 1680. Such an earthquake may also cause great damage throughout the region.

In Southern California alone there are over 300 other faults that may also cause damaging earthquakes. Most everyone in Southern California lives within 30 miles of one of these faults. When earthquakes on these faults are in populated areas, the losses can be substantial. The Northridge earthquake in 1994 caused more than 33 deaths, more than 9,000 injuries, and \$40-\$42 billion in losses.

No one knows when or where such a quake will occur, but everyone can reduce their risk of death, injury, and property loss in an earthquake by following the Seven Steps to Earthquake Safety

outlined on the reverse side of this Focus Sheet, wherever they live, work, or play.

The Seven Steps to Earthquake Safety

The following steps are excerpted from "Putting Down Roots in Earthquake Country." The full text can be viewed and ordered at www.earthquake country.info.

	ep 1: Fix potential hazards in your home
	Install latches on kitchen cabinets.
	Secure TVs, stereos, computers, etc. with Velcro straps. Use putty or wax
П	adhesive for smaller items. Hang mirrors and artwork from closed hooks.
	Secure top-heavy furniture and appliances to walls.
	Install flexible connectors on gas appliances.
	Strap water heaters correctly to the wall.
	Store flammable or hazardous materials on lower shelves or on the floor
Step 2: Create a disaster plan	
	Practice "drop, cover, and hold on."
	Keep shoes and a flashlight next to each bed.
	Take a Red Cross first aid and CPR course.
	Know how and when to shut off utilities.
	Learn how to properly use a fire extinguisher.
	Select a safe place outside of your home to meet your family or
П	housemates after the earthquake. Designate an out-of-state contact person who can be called to relay
	information.
	Keep your children's school release card current.
Sto	ep 3: Create disaster supplies kits
	ep a <i>personal disaster supplies kit</i> in your home, in your car, and at work,
	h at least the following:
	Medications and important medical information
	First aid kit and handbook
	Spare eyeglasses or contact lenses
	Bottled water and snack foods Whistle (to alert rescuers to your location)
	Emergency cash, in small bills.
	List of out-of-state contact phone numbers
	Working flashlight with extra batteries and bulbs
	Personal hygiene supplies
	Copies of personal identification
	In addition to your personal disaster supplies kits, store a household
	disaster supplies kit with a three-day to one-week supply of items needed to live without normal services (water, electricity, etc.) and to begin recovery.
٥.	
	ep 4: Fix your building's potential weaknesses
	rour building needs the following retrofitting, you likely need to consult a fessional:
П	The framing of your house should be bolted at least every 6 feet to
	the perimeter of the concrete foundation (every 4 feet in a multistory
	building).
	Homes with a crawl space should have plywood connecting the studs of
	the short "cripple" walls.
	Larger openings in the lower floor, such as a garage door, should be
П	properly reinforced. Masonry walls and chimneys should be reinforced.
For	those who rent: You control which apartment or house you rent. Ask the

shaking stops.

Step 6: After the earthquake, check for injuries and damage

	If a person is bleeding, put direct pressure on the wound. Use clean
	gauze or cloth, if available.
	Administer rescue breathing if necessary.
	Carefully check children or others needing special assistance. Do not move seriously injured persons unless they are in immediate
	danger of further injury.
	Get medical help for serious injuries.
Check for damage:	
	If possible, put out small fires immediately.
	Shut off the main gas valve only if you suspect a leak. Wait for the gas company to turn it back on.
	Shut off power at the main breaker switch if there is any damage to your
	house wiring. Unplug broken lights or appliances as they could start fires.
	Hazardous materials such as bleach, chemicals, and gasoline should be
	covered with dirt or cat litter.
	Stay away from chimneys or brick walls with visible cracks. Don't use a
_	fireplace with a damaged chimney.
	Stay away from downed power lines and objects in contact with them.
Step 7: When safe, continue to follow your disaster plan The first days after the earthquake	
	I you are sure there are no gas leaks, do not use open flames or operate
	electrical or mechanical device that can create a spark. Never use the
•	wing indoors: camp stoves, gas lanterns or heaters, gas or charcoal grills,
	as generators. These can release deadly carbon monoxide or be a fire
	ard in aftershocks.
	Turn on your portable or car radio for information and safety advisories.
	Call your out-of-state contact, tell them your status, then stay off the
	phone.
	Check on the condition of your neighbors.
	If power is off, plan meals to use up refrigerated and frozen foods first.
	If your water is off or unsafe, you can drink from water heaters, melted ice

If you cannot stay in your home...

of emergency services.

cubes, or canned vegetables.

Because shelters will likely be overcrowded, do not leave home just because utilities are out of service or your home and its contents have suffered only moderate damage. If you do evacuate, tell a neighbor and your out-of-state-contact where you are going, and take your personal disaster supplies kits and other essentials.

Report damage to your local building department and to your local office

This project was supported by FY07 UASI funding awarded by the California Emergency Management Agency, through FEMA/DHS.

This information sheet is produced as part of the Emergency Survival Program (ESP). ESP is an awareness campaign designed to increase home, neighborhood, business and school emergency preparedness. ESP was developed by the County of Los Angeles. The California Emergency Management Agency (Cal EMA) and representatives from Contra Costa, Imperial, Inyo, Kern, Los Angeles, Marin, Mono, Orange, Riverside, San Bernardino, San Diego, San Luis Obispo, Santa Barbara, Santa Cruz, and Ventura counties, Southern California Edison, the Southern California Earthquake Center and the American Red Cross assist in the development of campaign materials and coordination of the campaign.
